

Title	Project on Europe and Middle East
College	Mott Community College
Duration	2020-2024

Objectives and Potential Impact:

Mott CC (MCC) seeks to engage more students and community members in global awareness and cultural literacy to increase their exposure to globally diverse cultures and experiences in the community. MCC will incorporate more international and global events on campus to provide students and community members with the opportunity to develop global awareness and cultural literacy for greater success in their future careers.

The programmatic focus of our work will strengthen MCC's International Institute including its Global Studies Endorsement program as well as our English Language Acquisition, and Study Abroad Programs.

Broad outcomes of this programming include

- 1) Reducing the fear of the unknown
- 2) Developing cultural literacy
- 3) Encouraging diverse thinking
- 4) Encouraging creativity, critical thinking, and problem-solving

In addition, enhancing international programming will help students develop academic and social relationships through a local and global context, cultivate a more inclusive campus culture and become more successful in their work and educational endeavors for the 21st century.

Community College Project Team:
